

## Step

design Mario Ferrarini

Extendable coffee table made of a supporting tempered glass top, 12mm thick, contained in two "shells" made in "folding" of aluminum honeycomb panels, pre-lacquered RAL-K7 9010 white or anodized. The lower part of the aluminum panel is milled to allow the inset of the legs, which are screwed to the glass top with a bushing. The shells are fitted with runners in a self-lubricating material, to allow them to slide.
