

Sailor

design David Lopez Quincoces

Bookcase inspired by the world of boating, which allows maximum freedom for floor-to-ceiling or wall mounted compositions. Steel uprights with hexagonal section 25 mm, fitted with holes having a center to center distance of 38,5cm (35cm of useful space) to install the shelves, and an additional wall fixing spacer, for greater structural rigidity (for the both versions).

Uprights finishes: matt transparent liquid painted steel or brass coloured steel with matt transparent finish.

Floor-to-ceiling support plates with joint, Ø50 mm in satinized brass with a transparent matt varnish, screwed to the uprights.

Floor, ceiling and wall support secured by black PVC elements.

Maximum height of uprights: floor-to-ceiling version 305 cm; wall-mounted version 250 cm with plate fitted for wall mounting (with a fisher) and wall support guaranteed by black PVC rounds. "Keel shaped" shelves (75/90/120/150 cm depth 33 cm) made of extruded aluminum bar, with glued an upper top in MDF (thickness 3mm) veneered in the finishings in collection and with terminal parts in solid wood, always in the same finishing of the "keel", fitted with joints to allow the fixing to the uprights.

Shelves available in the finishes: Stone Oak® veneered top with matt black painted "keel" part and terminal parts; top in bleached maple with "keel" and terminal parts in Canaletto walnut "rigatino".
